

EXAMPLE
Dr. George Washington Carver

The Awesome Activator™

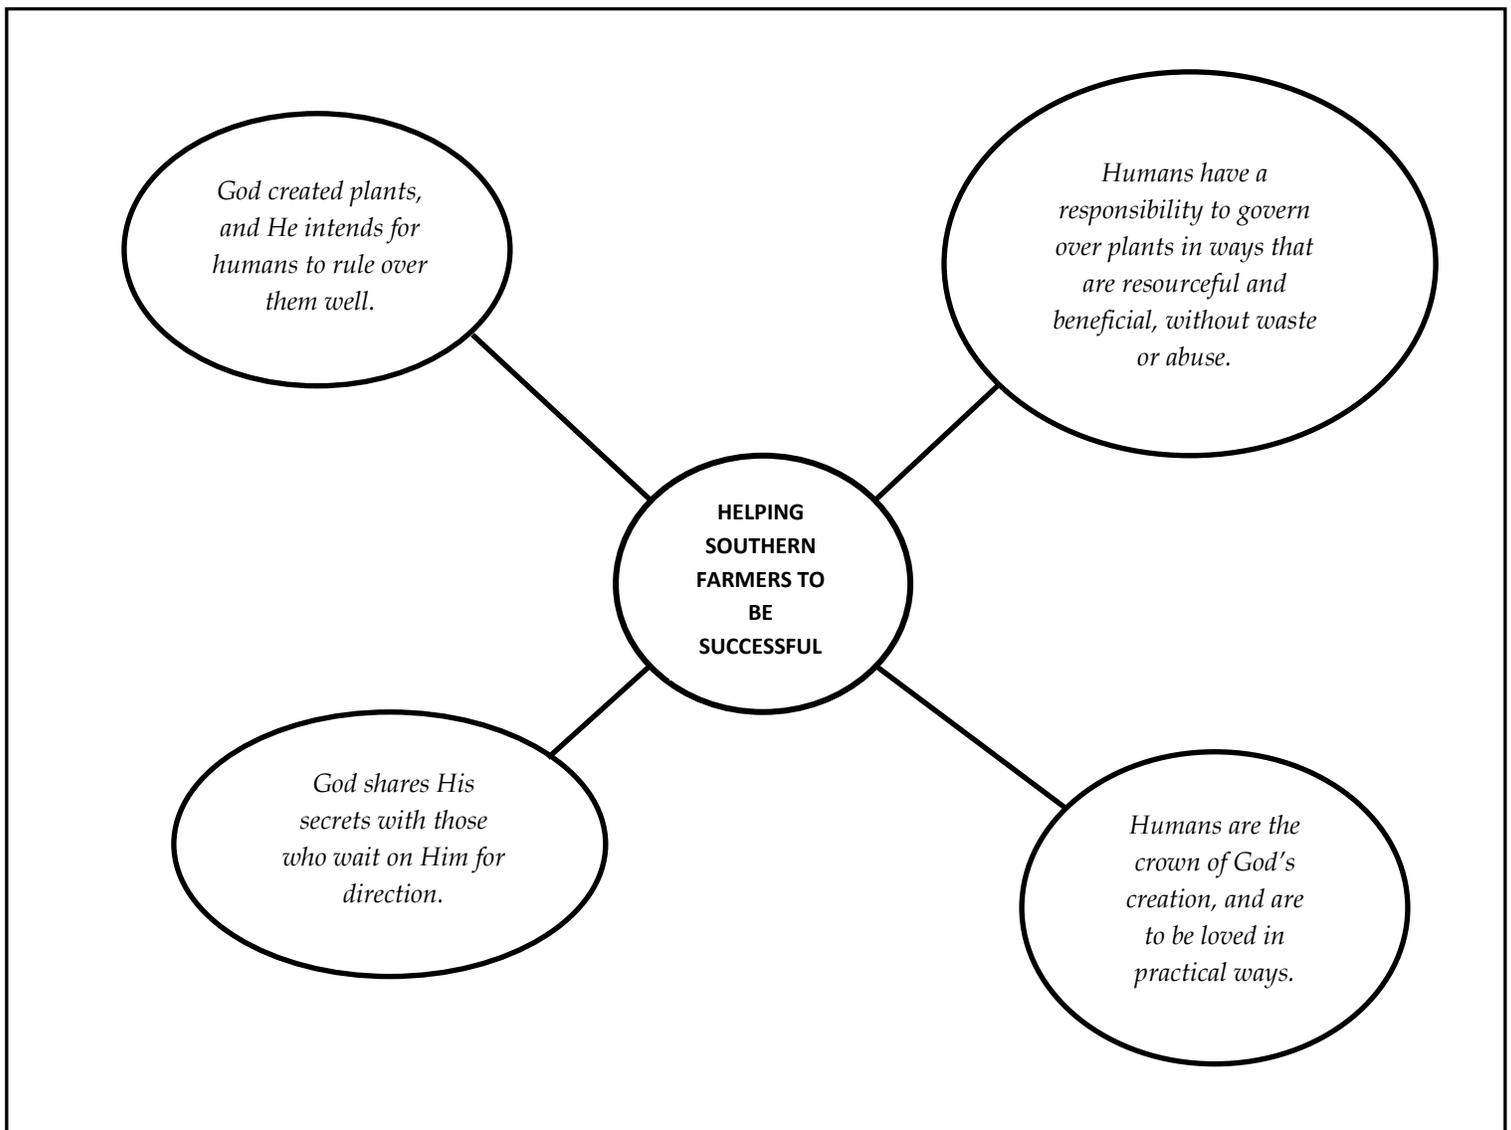

1: Think of an endeavor you want to turn into work worth doing, and write this endeavor inside the bubble shown in the center of the blank area below. This endeavor may be *any use of energy* (mental or physical) that *fulfills the First Commission* and *benefits others* (or prepares you to do so). For example: mowing the lawn, washing dishes, taking care of a pet, doing math problems, working on a science project, writing a story, etc.

2: Brainstorm 3-6 specific elements of the Biblical "Big Picture" (the Biblical Worldview) that have a particular connection with your central endeavor. Pick connections that interest you. (Use the "96 Biblical Worldview Truths" to get started.) Write these "connections" in "bubbles" around your endeavor.

3: On the back of this page, write down a few ways you could apply the biblical "connections" (identified in step 2) to your endeavor. Pray! Ask God for help. Think outside the box! Talk it over with someone.

4: Think about any preparation you may need to do to be successful. (Is there any training you need to have? Any research you need to do? People you need to talk to?) Write these things down on the back of this page.

5: Finally, on the back of this page write specific action steps you will to take to turn your endeavor into *Awesome Activity!*

Some ways I could apply Biblical Truths (as shown in the outer bubbles) to my endeavor (shown in the middle):

I could co-work with God to create new products from peanuts, sweet potatoes and soybeans that are beneficial to humans.

I could help generate new economic markets for these products.

I could demonstrate my love for farmers by teaching them how to rotate cotton crops with plants that will revive the soil, such as peanuts and soybeans.

Some skills I must develop (or preparation I must make) in order to succeed: [Training? Research?]

I must turn my attention to chemistry and add it to my knowledge of botany.

I must continue to make prayer a regular part of my day, to hear God's secrets about plants, and discover ways to make new products from them.

I must educate farmers about the importance of crop rotation.

I must find new markets for products created from plants.

Action steps I will take:

I will combine my knowledge of botany with my knowledge of chemistry in the laboratory.

I will rise early and seek God for His directives daily, and set aside time to be alone with God in "His Little Workshop," listening to what He has to share with me about creating products from peanuts, sweet potatoes and soybeans.

I will develop a "School on Wheels" to go to the farmers and teach them first-hand how to rotate crops successfully.

I will establish a center at Tuskegee Institute for the development of renewable resources from plants, and contact Henry Ford to urge him to use plastics from soybeans in his production of automobiles.
